

the scamper method in glasses

by Inés, Emma, Irene and Daniela

SUBSTITUTE

- We put 2 glasses instead of 1 glass: un glass would be the normal glass (to see good or for the sun), and the other would a screen.
- We also put solar panels instead of paste, because our glasses would need energy, and with solar panels they would be more environmentally friendly.

← Made up of solar panels

CoMBINE

We combined the glasses with:

- A camera
- A microphone
- Headphones
- A light
- With Internet

ADAPT

- We adapted a cleaner to the glasses, because then we wouldn't have to clean them.
- We added a Bluetooth system to the glasses, for listening to the music that we have in our phones.
- We decided to add a GPS system, so then we won't lose the glasses because we would know where they are in every moment.

MODIFY

We decided to modify its size, making it smaller for children or animals.

The animals would need them for improve their sight if they see bad, or to have a GPS system to know where they are if they get lost.

PUT OTHER PURPOSES

- You can use it to see in the dark, because they have a light.
- You can also listen to music because they have headphones.

ELIMINATE

- We realised that we could eliminate the arms of the glasses...
- ...and that we could eliminate its shape, and create a tablet that has a transparent screen and that is environmentally friendly.

REVERSE

We didn't know how to reverse them, so we don't have any idea here, but if you have any idea you can tell us.

THE GLASSES' NAME

We decided to call our glasses IDEI, as they are our initials:

- Inés
- Daniela
- Emma
- Irene

Idei Factory

• innovación - estrategia - productividad •
